Assignment # 1

Q1: Write a program which contains:

-> two user defined types **NewsArticle** and **Tweet**.

NewsArticle consist of two fields : {author: String, content: String}

Tweet consist of two fields : {username:String, content:String}

-> a trait with the name **Summary**, which contains a method signature.

method signature like this: **fn summarize (&self) -> String;**

-> Implement Summary trait on type NewsArticle and Tweet.

-> In main function make instances of NewsArticle and Tweet and call summarize method on it.

Note:
The whole code is given in the chapter 10.2, you just have to integrate it.

Don't Just copy paste it, as we would randomly select anyone from class to explain the code given in this assignment.
